

RM-10765

The petition.

I respectfully request that you consider favorably the petition before you. I believe the Widecast service proposed would offer a needed additional level of redundancy for news and communications that might be disrupted through a sequence of happenings either by nature, human mistake or terrorist action.

For those that need the primary or backup news and bulletin receiving capability the other Widecast reception methods proposed would be relatively easy to implement. For those of us that enjoy using teletype this would offer a chance to setup and operate a receiving system for information accessible on a regular basis using machines that have a rich and long history.

Respectfully,

Kenneth A Schwieker
Opelika, Alabama
